PROJECT REPORT

Banking And Money Management System

APPROACH

Ask for the input details such as principal amount, rate of interest, and time period . Then calculate the simple interest and print the total amount to be repaid in two years.

IMPLEMENTATION

I used Input statements for asking about the amount , time and rate of interest, after which If-else loop is used to differentiate between eligible and non eligible customers and finally the simple interest is calculated and the total amount to be repaid in two years is printed.

RESULTS

Simple interest is calculated according to the customer and the total amount to be repaid is equally divided in two years.

ANALYSIS

Project is about calculating simple interest on the amount of loan . In this input is taken from the user and simple interest is calculated and at last amount to be repaid is shown.
